

Corrosion Resistant Bottom Paint Masterbatch

A Core Material for a Cold Coating Primer

Features

Stable performance

Environmental protection and safety

Non-hazardous, easy to transport

Easy to get, reduce costs

Our primer masterbatch is a specially formulated material designed for the convenient processing and manufacturing of anti-corrosion tape base coatings. It contains high concentrations of functional components, including butyl rubber or oxidized asphalt, tackifying resins, and stabilizers. At the application site, this material is immersed in an appropriate solvent and then stirred to produce a base coating that is compatible with the adhesive of anti-corrosion tapes. Its performance is equivalent to that of the original primer. Detailed operational procedures are outlined in the product's technical documentation.

Compatible models: 1019,1027,1035,1058.

Storage and Shelf Life

This product should be stored in a cool, dry and ventilated place. During transportation, it must be protected from sun and rain, and extreme temperatures should be avoided. During storage, the temperature should be below 30°C (86°F) and humidity should not exceed 75%. The shelf life is three years from the date of production.

Packaging

according to the amount of corresponding components.
